

Certified Data Destruction Services

Brantjes Data-Vernietiging B.V.

Haarlem, The Netherlands

Certified Data Destruction Services

Secure destruction and recycling of hard drives and hardware

Hard drives contain lots of sensitive information and when you retire old hardware you want this data to be destroyed, forever.

This is where Brantjes Data-Vernietiging can help.

We provide a 100% certified service for data- and hardware destruction for companies in The Netherlands. All your secret bits and bytes will be destroyed in our industrial shredder. The shredded material gets recycled after the destruction process.

Collection and data destruction within a week

1. Collection
2. Transport
3. Destruction

This is how it works: Collection

#1 Collection of hard drives and hardware

It's up to you how much and what kind of materials you want to shred. If needed, we can provide your company with secured lockable bins. Your media and hardware is safe during the collection process.

- ✓ Make use of secured lockable bins
- ✓ Removal of any amount and any kind of hardware
- ✓ You let us know when we can collect your hardware for destruction

This is how it works: Transport

#2 Safe transport to our location in Haarlem

It is important to know that the whole collection and destruction process is 100% certified because of our CA+ certification. This is an independent official certification board for secure data destruction in The Netherlands. When we collect your hardware, we do this with a secured truck. Your materials are always safe with us during the whole process.

- ✓ Secured transport to our destruction site in Haarlem
- ✓ We unload the materials in our locked destruction centre
- ✓ 24/7 camera surveillance

This is how it works: Shredding

#3 Shredding your hardware within 24 hours

Within 24 hours we will shred all your data in our industrial shredder. What is left are small fractions of metal and plastics. No data can be recovered. The remaining pieces of hardware, such as workstations without a hard drive, get recycled. Also the shredded materials will be environmentally friendly recycled.

- ✓ 100% certified and secure data destruction
- ✓ Physical destruction of hard drives in our shredder
- ✓ After the shredding process all the materials will be recycled

Official certificate of destruction

All your data is now shredded. After this process we provide you with your official certificate of destruction. This certificate is a proof of destruction. It contains the amount of destructed data and hardware and your company name and place.

Extra services

Not every client is the same. Some clients demand a more customized service. And we can deliver that without a problem. For example, we can provide:

- ✓ **Registration of every piece of hardware**

We can scan every bar code with our hand scanner, before the hard drive meets our unforgiving shredder. After destruction you will get a full report of every shredded hard drive. This is to double check the process.

- ✓ **Video of the destruction process**

We have multiple camera's that record the destruction 24/7. If needed we can provide your company with a video summary of the destruction of your data.

✓ **Digital data erasure and degaussing**

If shredding isn't enough security for you we can also wipe or degauss your hard drives. After this erasure process we of course shred your hard drives.

We use *Blancco*[®] to wipe the hard drives or a degaussing machine to destroy data on the hard disk with a strong magnetic field.

Safe, Fast and Secure

Data destruction by Brantjes Data-Vernietiging is safe, fast and secure. We provide our services for more than 25 years in the Netherlands. Our clients rate our services with a 9 out of 10. [Read more customer reviews here.](#)
